PowerDsine Overview

PowerDsine Ltd. (NASDAQ: PSDN) is a leading provider of the fast-growing power over ethernet (PoE) technology that allows power to be transmitted over the same network cable as data. PowerDsine has been a pioneer in the development of the PoE marketplace from its inception.

PowerDsine first developed PoE technology in 1998 and was a founding and active member of the IEEE 802.3af Task Force, which ratified 15.4W PoE in June 2003. Subsequently, PowerDsine has been a leader and major market shaper in this space.

The company designs, develops, and supplies integrated circuits, modules, and systems that enable the implementation of PoE in local area networks (LANs), providing the capability to deliver and manage electrical power over data network cables. PowerDsine offers system (midspan) solutions and integrated products to its customers that want to enable PoE capabilities in their Ethernet switches or networks in order to deliver PoE for applications such as voice over IP (VoIP) phones, wireless LAN access points, and IP security cameras.

Specialist Area:
**Wireless Networking
IP Communications**

Sectors:
All vertical industries

Sphere of influence:
**Americas International, Asia
Pacific, EMEA, Japan and US**

**International Headquarters
